

Daily Snapshot

Loaded Cars On Line					
Pipeline	Railway	Origin	Enroute	Destination	Total
					0
Prince Rupert	CN	75	691	78	844
Thunder Bay	CN	100	161	32	293
	CP	363	100	487	950
		463	261	519	1,243
Vancouver	CN	53	1,341	262	1,656
	CP	1,215	1,118	563	2,896
		1,268	2,459	825	4,552

Loaded Cars Not Moving					
Pipeline	Railway	24 - 48 Hrs	48 - 72 Hrs	> 72 Hrs	Total
					0
Prince Rupert	CN	110	17	227	354
Thunder Bay	CN	71	1	1	73
	CP	264	112	124	500
		335	113	125	573
Vancouver	CN	32	12	39	83
	CP	484	132	453	1,069
		516	144	492	1,152

Trailing 14 Day Performance - Loaded Cars On Line

Trailing 14 Day Performance - Loaded Cars not moving for 72 hours

Trailing 14 Day Performance - Cars placed for unloading

The Rail Network Status report has been developed to provide a daily view of the status of the principal grain pipelines for ATC member companies who represent 90% of Western Canadian railway grain shipments. The report provides a daily snapshot of selected metrics for each of CN and CP's Vancouver and Thunder Bay and CN's Pr. Rupert grain pipelines. Metrics are based on actual car movements each day for all participating ATC shippers in these corridors.

Each day's report is based on a network snapshot of the status of all loaded cars as of 23:59 one day prior to the publication date and all the reported car movement events for that calendar day. The 24-hour delay in reporting is to allow for the capture of late reporting of railway events and to ensure the most complete data capture possible. For example, a report published on March 15th will provide a status as of 23:59 on March 13th.

The report provides a snapshot of the current day being reported and provides a 14-day trailing view of performance for each pipeline for the same metrics.

The metrics included in the report include the following:

Loaded Cars on Line	A count of loaded grain cars within each pipeline segregated by location – origin, enroute, destination. Status of each car is based on the last reported railway event and location for each car. The count of loaded cars on line includes all cars that have been released loaded to the railways at origin, cars moving between origin and destination and cars that have arrived at destination. Cars that have been reported as placed for unloading at destination are excluded from the count.
Loaded Cars Not Moving	A count of cars each day for which no movement event has been reported by the railway for 24-48 hours, 48 – 72 hours or more than 72 hours. To provide greater insight as to where delays are occurring the 14-day trailing performance data shows cars not moving for 72 hours or more based on location - at origin, enroute and at destination.
Cars Placed for Unloading	A count of grain cars reported by the railways as placed for unloading at destination during the day being reported.
